ETF Tools Progress Update

Static website implementation and data-source status - November 4, 2026

Data sources

The ETF tools use official issuer websites as the primary sources. Data is collected as static snapshots; there are no live API calls or automatic updates in the current scope.

Issuer	Use	Current source
Vanguard	ETF list and VYMI holdings	Official Vanguard product and holdings pages
Schwab Asset Management	SCHD holdings	Official SCHD product and holdings pages
J.P. Morgan Asset Management	JEPI data	Official JEPI product page
iShares / BlackRock	Product list and expense ratios	Official iShares product list dated 09/01/2026
State Street SPDR	Product list	Official SPDR source under review for a current snapshot
Nasdaq Trader	Ticker/listing confirmation only	Not used for yield or expense-ratio metrics

Tool status

Tool	Status	Notes
#2 Overlap	Working	Static SCHD vs VYMI holdings comparison using issuer snapshots.
#4 Screener	Interface working; data curation ongoing	The final fixed 342-ETF list still needs approval or a documented selection rule.
#5 Backtester	Working	Static SCHD, JEPI, VYMI, and VOO comparison using monthly adjusted-close data as a total-return proxy.

Screener data research

The current research has 116 validated Vanguard records and 450 cleaned iShares records. Official sources do not publish every metric for every fund, so unavailable values remain blank or appear as N/A. No yield, AUM, or expense-ratio value is estimated or invented.

The requested 342-ETF universe is a client requirement, not a standard finance-defined list. Please confirm whether an approved 342-ETF list exists, or whether the developer should curate the fixed list from the official issuer sources above.

Client confirmation requested

Do you already have an approved list of the 342 ETFs, or should we prepare the final fixed list from official issuer sources?
